Abstract (en)

Disclosed is a paper money processing device provided with a transport unit (15) for transporting paper money fed from a hopper unit (13) to an accumulation unit (17) or a reject unit(18), a recognition unit (24) for recognizing a code/number of the paper money transported by the transport unit (15), and a control unit (25) which executes a calculation process using a sum check function on the basis of the code/number obtained from the code/number recognition result of the paper money by the recognition unit (24), and, when the calculation result of the paper money is not a predetermined value, acknowledges that the code/number of the paper money is incorrect, and controls the transport unit (15) to transport the paper money to the reject unit (18). Thus, it can be confirmed as to whether or not the code/number is correct, and malfunction in various processes by using an unconfirmed incorrect code/number can be prevented.
