Abstract (en)  
[origin: WO2012005669A1] A dispenser (2) for a perforated web of absorbent paper, tissue or nonwoven material in the form of a roll (6) or a stack is provided. The dispenser (2) comprises a housing (4) forming a compartment, a passage arrangement (12) defining a web passage (18), and an oblong dispensing opening (10). Inside the compartment a web path is defined from a position of the roll (6) or the stack to the oblong dispensing opening (10) including the web passage (18). An edge portion is provided at each of two lateral short sides of the oblong dispensing opening (10) for separating a sheet from the web along a perforation. The edge portions are arranged at a distance from each other narrower than a width of the web. A straight edge (24) is arranged alongside, and perpendicularly to, the web path. The web path changes direction as it passes over the straight edge (24). The straight edge (24), the web passage (18) and the oblong dispensing opening (10) are arranged directly adjacent to each other in that order seen in a direction of dispensing of the web.
