Abstract (en)

[origin: WO2012004409A1] The present invention relates to a method for continuously producing foam glass boards, in which the foam glass is foamed from at least one raw glass material and at least one blowing agent in a foaming oven to form a foam glass strand (16) and is continuously cooled in a cooling oven (5), wherein during foaming and cooling the foam glass strand is transported on a continuous conveying system through the oven(s), and wherein the foam glass strand is cut in the oven or between two ovens. The invention further relates to a corresponding cutting device and to a foam glass cooling section comprising a corresponding cutting device.
