Abstract (en)

[origin: WO2012003917A1] The invention relates to a camshaft adjuster for a motor vehicle, comprising a controller and/or regulator unit (11) which is designed to adjust a phase position of at least one camshaft (12) in a standard operational mode to an at least temporarily constant phase position. According to the invention, the controller and/or regulator unit (11) can be operated in an engine start mode which is provided for adjusting a valve opening angle range (a) which is smaller than a geometric standard opening angle range (β).
