Abstract (en)  
[origin: US2012006948A1] 2. A clamp for securing components, in particular string-like or linear structural members, like pipelines, hoses, or cables, having at least one clamp part (3), of which the outer contour (4) delimits at least partially a receiving space (5) for receiving the respective component, at least one clamp part (3) having a mechanism (6) for minimizing corrosion, in particular, crevice corrosion, at every component that is held, is characterized in that the mechanism has at least one sacrificial element (7) that is visibly consumed with the onset of corrosion and continued duration of use of the clamp fastener and that the respective sacrificial element (7) is placed, as an independent component, on the outer contour (4) of the assignable clamp part (3).
