Abstract (en)

[origin: WO2012007073A1] The invention relates to a card reading apparatus for a card comprising a contact support having read contacts with a card insertion opening, and also a card slider which can be moved to and fro along the contact support, wherein also a latching apparatus for latching the card slider is provided and the latching apparatus can be kept either in the latched or in the unlatched position by means of a release magnet, wherein at least one moving portion of the release magnet is connected to a mass compensation element by means of a shift lever.
