Abstract (en)

The present invention refers to an element (10, 20) for fastening devices, in particular for sports footwear. In particular, said element (10, 20) is obtained by a profile (1) extruded in a direction parallel to the longitudinal extension of said element (10, 20) and comprising a plate (1 A) having a longitudinal extension (L) greater than its transversal extension (T), from which protrude, perpendicularly to one of the two faces of said plate (1 A), a first and a second longitudinal rib (1B, 1 C) that extend near and parallel to the side edges of the plate (1 A), along the entire longitudinal extension (L) of said plate (1 A). The present invention also refers to a process for manufacturing an element (10, 20) for fastening devices.
