Abstract (en)

[origin: EP2591972A2] The element has an upper cover region comprising a securing portion for securing against unscrewing of a tongue attachment screw between a position tongue and a pin joint (10). A lateral cover region is integrally formed with and arranged vertical to the upper cover region. Two securing areas are integrally formed with the lateral cover region, aligned vertical to the cover regions and spaced from the upper cover region. Each securing area secures an eccentric cam region (24) and a fastening nut (28) for fastening of a retaining clamp (18) at the pin joint against unintended removal.
