Abstract (en)

A new packing for rolls (10) of netwrap for roundbalers, i.e. for rolls obtained by wrapping a netwrap (R), made of plastic, intended to be used in an agricultural packing machine, typically a roundbaler, for the formation of bales (B), for example of hay, rolled and pressed, comprising: - an outer wrapper (11), consisting of a film (12) of plastic material, in particular polyethylene, wrapped around the outer surface of the netwrap roll (10) for roundbalers; wherein this wrapper (11) of plastic material in turn exhibits: - a bonding, substantially continuous, that is made with a film of glue (13) applied, substantially along a generatrix of the cylindrical surface of the roll, on one or both flaps of the film (12) of plastic material wrapped around the roll, so as to close the wrapper (11) on the outer cylindrical surface of the roll, preferably while leaving an exceeding strip (14) of the film of the plastic material in order to facilitate the removal of the packing; - one or more welding or gluing areas, that are carried out, along a direction substantially parallel to the diameter of the two sides forming the bases of the cylindrical roll, on the lateral and surplus portions (12') of the film of plastic material folded on these two sides, so as to ensure a complete seal of the roll with respect to the external environment; and - one or more handles (16), consisting of bands, ribbons or strapping preferably of polypropylene, that are fixed, on the outside of the wrapper (11), in a suitable position in order to facilitate the handling of the roll.
