Abstract (en)
[origin: EP2592187A1] The lane boundary device has separating elements (1) such as concrete and/or metal elements of same shape, which are arranged along the edge of the road, or between lanes, and beside the longitudinal direction and in communication with each other. The separating element has deformation element (2) provided between a stop (3) fixed on the road bump and thrust bearing (4) provided on the separating element, such that the deformation element is deformed by the force applied at the side of the separating element.
