Abstract (en)  
[origin: EP2592198A2] The edge-profile (11a) has an edge closure surface (15) extending in longitudinal direction (L) for covering an edge of a facade element (13) and a side-arm surface (19) angular against the edge closure surface. The arm surface has an arrangement made of multiple elevations (21) and depressions (23) alternating to each other and extending parallel to the longitudinal direction. The elevations define a supporting surface (25) for the facade element, which extends away over a bigger portion of the arm surface.
