Abstract (en)
[origin: EP2592208A2] The gate has a transition arrangement forming a transition between a door leaf and wall including a soffit in a closing position of the leaf. The transition arrangement includes an outer surface, which extends approximately parallel to an outer periphery of the leaf. A bridging element (30) is associated to the leaf for bridging a distance to an outer wall surface of a wall including an opening and/or an outer surface of the transition arrangement in a direction extending perpendicular to the leaf. The bridging element is fixed relative to the outer periphery of the leaf.
