Abstract (en)

[origin: EP2592211A1] The sun protecting arrangement (10) has an adjustable curtain (26) with a primary drive (14) and a secondary drive (16). A control unit switches OFF the activated secondary drive in a retracted end position of curtain. The control unit includes common sensors to detect the changes in position of the curtain. An evaluation unit (34) determines the absolute position of curtain independent of primary and secondary drives, and brakes the secondary drive in retracted end position of curtain.
