Abstract (en)
[origin: EP2592360A2] An enclosure (1) for a fluid transport system comprises at least one wall (2) which defines the enclosure, a fluid inlet (10) and a fluid outlet (12). An access opening (6) permits access to the enclosure and a closure panel (8) is provided for closing the access opening. A guide rail (22) slidably receives and supports the closure panel (8). The guide rail (22) is movable between a first operative position in which it holds the closure panel (8) in a closed position to close the opening (6) and a second operative position in which the closure panel (8) is spaced from and parallel to the opening (6) and able to slide in the guide rail (22) away from the opening to permit access to the enclosure through the opening (6) while remaining parallel to the opening (6).
