Abstract (en)
[origin: EP2592640A2] The switch has a rotor housing (20) turned to an ON position and an OFF position. Two electric contact arms (50, 51) are rotatably mounted in the rotor housing and jointly swivable with the rotor housing. A display element is indirectly or directly coupled to the rotor housing to indicate the ON position of the rotor housing in a display position and to indicate the OFF position of the rotor housing in another display position. A control element e.g. control disk, is turned together with rotation of the rotor housing. The control disk is designed as a cam disk.
