Abstract (en)

[origin: EP2592850A1] The method involves providing a left-hand internal input signal in a left-hand hearing device, and providing a right-hand internal input signal in a right-hand hearing device. A sending mode of one of the hearing devices activated automatically in dependence on one of the left or right internal input signal. The sending mode is deactivated in one of the hearing devices in dependence on one of the left or right internal input signal and of a communication signal received from the respective other hearing device. An independent claim is also included for a binaural hearing system comprising a left-hand hearing device.
