Abstract (en)

[origin: WO2012007371A1] A drawer (1) having two side panels (5) and a rear wall (4), wherein the rear wall (4) is fixed in relation to the side panels (5) by latching means and can be moved to a latching position only by being shifted in the direction of the longitudinal axis of the drawer (1), is formed such that the latching means comprise spring-loaded latching pegs (6), which are arranged in pairs on the side panels (5) and run parallel to the rear wall (4), and also latching notches (7, 7a), which receive the latching pegs (6), in boundary webs (8) of the rear wall (4) which run parallel to the side panels (5), wherein each pair of latching pegs (6) is spring-loaded transverse to the longitudinal axis of the drawer (1) and the boundary webs (8) are provided with guide sections (9) by means of which the latching pegs (6) can be moved into the latching notches (7, 7a) against the spring force.
