Abstract (en)
[origin: CA2804980A1] The invention relates to a dispenser (1) for dispensing liquid to pasty compositions, with a dispensing head (3), which has a dispensing mouth (30), and with a reservoir (7) and a dispenser head part (2), wherein the dispensing head (3) is movable relative to the dispenser head part (2) from a dispensing stand-by position to a lowered position and vice versa. In order to design and develop a dispenser in such a way that the dispensing mouth is oriented without relative rotation or without at least substantial relative rotation with respect to the dispenser sleeve part when the dispensing head is extended, it is proposed that the dispenser head part (2) moves the dispensing head (3) in and out only axially.
