Abstract (en)

[origin: WO2012007822A1] The present invention regards a satellite terminal (334) that is designed to be installed on board a train (33) and is configured for receiving navigation signals from satellites belonging to one or more satellite navigation systems. Said satellite terminal (334) is characterized in that it is moreover configured for storing georeferencing data of a railway route of the train (33) and for determining, on the basis of the georeferencing data stored and of navigation signals received, a position of the train (33) along the railway route and an integrity level associated to said calculated position.
