Abstract (en)
[origin: WO2012007468A2] The invention relates to a system for constructing a building. According to the invention, such a system includes a supporting framework that includes vertical members (101, 102, 201, 202, 203, 301, 302) and crossbeams (103, 104, 204, 205, 303, 304, 10, 20, 30, 40, 50, 60), and an inner shell framework and an outer shell framework, each shell framework consisting of at least two partial walls formed from mutually parallel elements that are spaced apart so as to be capable of intersecting with and being connected to parallel elements of at least one other partial wall of the same framework, wherein said outer shell framework is assembled around said inner shell framework, and wherein at least some of the parallel elements of at least one partial wall (M1I, M2I, M3I, M4I, SI, PI) of said inner framework and at least some of the parallel elements of at least one partial wall (M1E, M2E, M3E, M4E, SE, PE) of said outer framework intersect each other and are connected to at least some of the vertical members and/or crossbeams of said supporting framework.
