Abstract (en)

[origin: WO2012007217A1] The cooler device (A) of the invention comprises at least one door (1) which is used for accessing to the inner volume of the device body (12) and is connected to this body (12) and also at least one door opening mechanism (2) developed for opening of this door (1) easily. The door opening mechanism (2) comprises at least one body (4) fixed to device door; at least one skid (5) moving back and forth within the body (4) and extending from one side to outside of the body (4); at least one arm (3) which is used for opening the device door (1) and activating the mechanism (2) (for moving the skid (5)) and is in connection with the body (4).
