Abstract (en)

[origin: EP2594165A1] The holder has a clamping piece (4) connected with an object or comprising the object. A corner piece (5) has two legs (6, 7) enclosing an angle. One of the legs is engaged behind a window frame or door frame (3), and the clamping piece is rotatably supported at the other leg. A rotary element (9) with an eccentric cam projection is rotatably supported in and/or at the latter leg. The projection is engaged with a corresponding eccentric cam recess in the clamping piece, and presses the clamping piece at a frame during rotation of the rotary element in clamping rotation direction (12).
