Abstract (en)

The forming head of the machine producing fuel or feed pellets containing a matrix plate with numerous forming tubes arranged concentrically relative to the drive shaft, whereby the matrix plate cooperates with the mechanism mounted on the drive shaft with crushing rollers (7) on bearings and equipped around the periphery with forming punches (8) that enter on roller rotation into the appropriate forming tubes of the matrix plate, is characterized in that each of the crushing rollers (7) has a conically shaped lateral surface and is firmly connected to the rotating mechanism (3), whereas the angle \pm of inclination of each of the crushing rollers (7) in relation to the surface of the matrix plate (2) ranges from 2.5 to 25°. The forming punches (8) of the matrix plate have a shaped work surface. (9).
