Abstract (en)

[origin: EP2594718A2] The device has a support element (3) e.g. U-shaped profile rail or flat profile plate, for supporting a window frame, where the element includes circular and slotted holes (6, 6'). The element is fixed at an edge of a building opening over a fastener. The frame is connected with the support element over a bracket part (4) in a mounting position. Two side pieces (8, 11) of the bracket part include openings (9) for fixing at the frame and the element, respectively. The openings of the side pieces exhibit diameter smaller than that of the circular and slotted holes of the element.
