Abstract (en)
The present invention concerns an elongated light unit extending at least on a first linear direction (X) and comprising: (c) A light source (3) capable of emitting light over at least a portion of the length of the unit along the first linear direction (X), and (d) A pervious to light protective metal screen (2) extending substantially parallel to said first linear direction (X) over the whole length of the unit, and positioned between the light source and the space to be lighted, Characterized in that, said pervious to light protective metal screen is made of metal surface profiles (2a) fixed to metal support profiles (2b) such that the surface profiles are aligned side by side at a distance from each other not exceeding 2.5 mm.
