Abstract (en)

[origin: WO2012010987A1] The invention relates to a combined heating, cooling and fire extinguishing installation which automatically assures all the different requirements of the three modes of operation, using a pipe system and the elements necessary to this end such as sensors, pumps, valves and an installation control system. The present invention discloses an economically viable combination of a fire protection installation and a fire alarm installation, with fire extinguishing nozzles, said combination automatically triggering fighting of the fire in a targeted and local manner by means of an intelligent installation control system.
