Abstract (en)
[origin: WO2012010362A1] The invention relates to a floor (F) for rail vehicles consisting of a four-layer structure of a first metal layer (1), a filling layer (2), a second metal layer (3) and a wear layer (4), which are undetachably connected to one another. According to the invention, the floor (F) is made in a single piece and covers the entire floor of the passenger space of a rail vehicle.
