Abstract (en)
[origin: WO2012010455A2] The invention relates to a refrigerator, in particular a household refrigeration appliance, having an appliance body defining a cooling chamber (5), filled with a thermal insulation foam (11), and comprising a front frame (13) enclosing a loading opening (3), which interacts with an appliance door (1), wherein a passage channel (32), in particular a foam-free passage channel, is provided on the side of said frame that faces away from the appliance door (1), and a heating pipeline (33) is fed through said foam-free passage channel. According to the invention, the heating pipeline (33) that is fed through the foam-free passage channel (32) is pressed into thermally conductive contact with the front frame (13) at a predefined pressing force (F).
