Abstract (en)  
[origin: WO2012012560A2] A data connection method for establishing a data connection between a bandwidth user on a network connected user device and a data source on a network connected target device over a communication network where the user's bandwidth consumption activities incur a bandwidth usage charge from the network operator providing the bandwidth connection, may comprise providing a bandwidth access software application with a bandwidth access software application identification code associated with both the bandwidth access software application and the provider of such bandwidth access software application; allowing user access to at least one specified online data address to access target content hosted on at least one target content source determined by the provider of the bandwidth access software application; monitoring and recording the online access activity and providing to an application activity system registry server the end user device identification code, application identification code and the recorded online access activity.
