Abstract (en)

[origin: WO2012010374A1] The invention relates to a method for quenching arcs in a gas discharge chamber (5), in which power is fed to a gas discharge chamber (5) and in which, both when there is a flow of current in a first direction and when there is a flow of current in a second, reverse direction, a gas discharge is generated. When an arc is detected, the supply of power to the gas discharge chamber (5) is interrupted and residual energy which is present in a feed line (17, 19) to the gas discharge chamber (5) and/or in the gas discharge chamber (5) is fed to an energy store (30).
