Abstract (en)
[origin: EP2596714A1] The shoe (1) has an opening and/or widening portion (4) for facilitating entering/stepping out. A lace and a slide fastener (6) are assigned to the opening and/or widening portion, so that the opening and/or widening portion is narrowable and/or lockable through tightening the lace by closing/locking the slide fastener. The lace is coupled to the slide fastener in such a manner that closing of the slide fastener tightens the lace. Pre-setting units are assigned to the lace to achieve tying temperature while closing the slide fastener.
