Abstract (en)

[origin: EP2596732A2] The present invention is provided with a magnetic lock device of the cover plate compositing a plug member disposed in the cover plate of the toilet and a fixed base disposed in the base of the toilet, the plug member is disassembly or locked to the fixed base, the present invention further includes a driving member or movable member, which is movably coupled to the plug member, the driving member is fixed with a magnetic member; a driven member, placed inside the fixed base and movable inside the fixed base; when sliding to a lock position, the driving member is plug into the plug member and locking the plug member to the fixed base with the effect of magnetic action; when the driving member is sliding to unlock position, the driven member is disposed with a first reposition spring, when the driving member is away from the lock position, the lock to the plug member is released; and a control mechanism disposed in the plug member has a limited portion to keep the driving member in the lock position or release the driving member from the lock position.
