Abstract (en)
[origin: EP2597220A1] The device has support rail that locks two opposite sides of a plate (3) with a substrate. The free end of plate is attached to elastic connecting element to form a channel into which plate is secured by adhesive. The plate, support rail and elastic connecting element are fixed to the substrate using a profile rail (6), and are incorporated in U-shaped receiving chamber. The plate is supported by elastic connecting element and support rail which are parallel to the transverse direction (5) of the plate.
