Abstract (en)
[origin: EP2597382A2] The device (1) has a heat exchanger comprising heat exchanger slats, and an air inlet (9) provided for ambient air. An air outlet (10) is provided for supply air entering into an area (2), where a longitudinal extension direction of the slats runs right-angle to an air outlet direction (19) of the air outlet. The heat exchanger has heat exchanger tubes that comprise heat exchange sections and deflection sections. The slats extend over the entire breadth of a housing. The air inlet has a demountable and air-permeable air inlet covering i.e. air inlet grid.
