Abstract (en)
[origin: WO2012013483A2] The invention relates to a device for operating a vacuum cleaner (10) having a receiving chamber (22) for a main filter (24), comprising a pressure sensor system (30; 30'; 30'') for detecting a parameter which characterizes a vacuum in a first region lying downstream of the receiving chamber (22) in the suction flow direction, a detection unit (34; 34') which detects, in dependence on the detected parameter, whether a main filter (24) is inserted, and a control unit (36; 36') which prevents startup of the vacuum cleaner (10) and/or outputs warning information to an operator of the vacuum cleaner (10) if it is detected that no main filter (24) is inserted.
