Abstract (en)  
[origin: WO2012013624A2] The invention relates to a fully jacketed screw centrifuge having at least one outlet for discharging clarified liquid from a drum (3), wherein said outlet comprises at least one or more passages (15) in a drum cover (17), each associated with a weir plate (19), each forming an overflow weir (21) at the radial inner edge thereof, wherein at least one deflecting device (23) is designed at the outside on the drum cover (17), such that an escaping fluid flow is deflected in the circumferential direction and undergoes a twist in the circumferential direction, wherein the at least one deflecting device (23) is designed such that the escaping fluid flow is deflected in the circumferential direction, maintaining the overflow weir (21) at the overflow edge of the at least one weir plate (19), directly in the axial extension of the uncovered region of the penetration opening (15).
