Abstract (en)
[origin: WO2012012815A1] The present invention relates to a rolling apparatus (1') having work rolls (2') and, if appropriate, having intermediate rolls, which are mounted in a rolling stand by means of roll chocks (5) via radial bearings (3). The special design of the rolling apparatus (1') makes it possible to retrofit the rolling apparatus (1') with an axial displacement device (18) with particular ease. The present invention also relates to a process for converting, in particular for subsequently converting, a rolling stand without an axial displacement device into a rolling stand with an axial displacement device.
