Abstract (en)

[origin: WO2012013459A1] The invention relates to a roller table (1, 1') for transporting a rolled product (5, 5') in a rolling train, wherein the roller table (1, 1') comprises at least two drive segments operated via converters (2a, 2b). According to the invention, at least one sub-segment (c) of the roller table (1, 1') can be switched by means of a switchover unit (3) on a first converter (2a) and/or on a second converter (2b). According to the invention, the rolling train is made more flexible compared to known solutions while having the same number of converters.
