Abstract (en)
[origin: WO2012013392A1] The invention relates to a consumption indication system (1) for a vehicle, in particular motor vehicle, having at least one display (2) for representing consumption information, having means (4) for capturing the current energy consumption of the vehicle, having a computing unit (3) for producing the consumption information to be represented on the display (2) as a function of the captured energy consumption and having a navigation system (10) connected to the computing unit (3). Provision is made here for the computing unit (3) to store, and to indicate if needed on the display (2), at least one start-point and target-point pair captured by the navigation system (10) and/or the respectively travelled distance and also at least one consumption value captured in each case between start point and target point.
