Abstract (en)

[origin: WO2012019603A2] The invention relates to a measurement probe for measuring a physical property of a medium in a channel or in a measurement chamber. The measuring probe comprises the following: a rod-shaped probe body for inserting into the medium through an opening of a wall of the channel or of the measurement chamber; a handle arranged at a first end of the rod-shaped probe body; a sensor element, which is arranged at a second end of the rod-shaped probe body and which is designed to produce an electrical sensor signal that depends on the physical property to be measured; and a transducer, which is connected to the rod-shaped probe body and which is designed to measure the position of the sensor element relative to the wall without contact.
