Abstract (en)

[origin: WO2012014554A2] An electric wires twisting device includes a rotor that has a slit portion provided in a part of the rotor in a circumferential direction of the rotor, a twisting rod provided on the inner circumferential surface so as to be projected therefrom and so as to face the slit portion, a rotary driving portion that rotates the rotor, and a setting portion that inserts a pair of electric wires parallel in a direction of the width of the slit portion into an inner side of the circumferential surface of the rotor so as to be individually disposed on both sides of the twisting rod. A diameter of an inner circumference of the rotor is greater than a width of the slit portion.
