Abstract (en)
An airing device comprises an airing rack (5,6) arranged to extend from a relatively flat storage state to a deployed state in which the rack is extended to provide a surface from which clothes may be hung; and a radiator (1) arranged to move from a storage state in which the radiator is disposed substantially vertically to a deployed state in which the radiator extends away from a wall on which it is mounted. In its deployed state, the airing rack locates over the radiator when in its deployed state.
