Abstract (en)

[origin: CN103128716A] The invention relates to a hand-held tool machine (100) provided with a tool accommodating part (104) for accommodating tools (101) and arranged on a matched tool housing (24). A drum-like tool change magazine (102) is mounted in the tool housing, is provided with at least one tool cavity (199) for storing tools (101) and is aligned with the tool accommodating part (104). The tool (100) has a slide-over element (150) coupled with an actuatable manual switch (120) that comprises a resilient locking element (250) that is provided to the slide-over element in a tool change position. A tool change magazine (102) is rotated around an associated rotation axis (103). A tool (101) is arranged in a tool chamber (199) or a tool operating position in which rotation of the tool change magazine is inhibited by the slide-over element, and the tool is releasably blocked in a tool holder (104).
