Abstract (en)

[origin: EP2599598A2] The slicing method involves separating food slices (6) from a food bar (3) using a cutting knife (2) of a slicing device (1), where a vibration sensor (8) is provided, which receives vibrations generated during impinging of the cutting knife on the food bar, during the entry of the cutting knife into the food bar or during cutting of the food bar. A signal (10) of the vibration sensor is used for setting slicing process or portioning process, where drive of the cutting knife or the orbital movement of the cutting knife is set. The position of the cutting knife is set in x- or y-direction.
