Abstract (en)  
The present invention relates to an appliance (1) comprising a casing (2), a receiving space with an aperture (60) for introduction of items and a closing door (6) for the aperture (60). The appliance is provided with a door closing device (8) comprising a blocking element (9) associated to the closing door (6) and a seat (27) associated to the casing (2). The seat (27) is adapted to engage with the blocking element (9) and adapted to retain the blocking element (9) in a blocking position when the closing door (6) closes the aperture (60). The blocking element (9) is displaceable between the blocking position and a releasing position in which it does not engage with the seat (27). A door safety device (15) adapted to prevent the closure of the closing door (6) is provided. The door safety device (15) comprises a retaining device (17) suitable to maintain the blocking element (9) in the releasing position.
