Abstract (en)
[origin: EP2600117A1] The measuring device (10) has a contactless sensor (16) that is provided in functional connection with a transcription assembly (14). The contactless sensor is provided to detect the displacement of the transcription assembly along the shift path (V) opposite to a duct element (12). The hydraulic fluid is divided into two fluid columns (18, 18') by the transcription assembly for the transfer of working pressure between the fluid columns.
