Abstract (en)
The present invention relates to an ultraflat heating assembly for use in dry heat electric radiators, comprising a conductor wire (6) wound around a support body (1) made of insulating material having a flat and elongated configuration, wherein the conductor wire (6) transmits heat when electric current flows through said conductor wire (6), at least one insulation plate (2, 3) made of heat resistant and insulating material being attached to each face of the support body (1), the assembly comprising connectors (4) connected to each end of the conductor wire (6) for connection to an electric power system, and the assembly comprising a cap (5) made of insulating material arranged at each end of the support body (1), wherein said caps (5) are attached to the insulation plates (2, 3) and to the support body (1), closing and insulating the assembly from the outside.
