Abstract (en)
[origin: WO2012018971A2] The present invention is a female part of a hook and loop fastener comprising a substrate and a knitted fabric constituted of warp yarns, weft yarns and loop yarns, wherein the warp, weft, and loop yarns are interwoven to form interlacing points, and the warp yarn forming the interlacing point progresses in a direction opposite to that of the loop yarn forming the interlacing point and the weft yarn forming the interlacing point. The female part of the hook and loop fastener exhibits excellent engaging force with a male part, where the left-right engaging force difference is small.
