Abstract (en)  
[origin: WO2012016884A1] A device (10) for dosed dispensing of a fluid medium is provided with a pen-like housing (11) which has a storage chamber (12) for accommodating the fluid medium and which has at its front end a tip (15) in which there is provided an outlet opening (17) for the fluid medium. Arranged in the front end is a valve element (18) which closes the outlet opening (17) under the force of a spring (19) and is arranged such that it at least partially opens the outlet opening (17) in the event of radial pressure (24) being applied from the outside on the front end of the housing (11). The valve element (18) is arranged in a tiltable manner at the outlet opening (17).
