Abstract (en)

[origin: WO2012016856A1] The subject of the invention is an air-conditioning system (1), notably for a motor vehicle, comprising an air-conditioning loop (2) and a secondary loop (3) through which a heat transfer fluid circulates and which collaborates with the air-conditioning loop (2), the secondary loop (3) comprising an upstream point (11) and a downstream point (12) between which points are formed a main line (14) comprising a heat storage module (8) and a bypass line (15) that bypasses the heat storage module (8). The heat transfer fluid circulates simultaneously through the main line (14) and through the bypass line (15).
